

## **GLASSTILE PRODUCT CODING SYSTEM EXPLAINED:**

The glasstile coding system is made up of four sections. Each section describes the product in terms of colour/colour blend, surface finish, layout/format and tile thickness.

### **Section 1: colour or colour blend code**

This section will always consist of 3 numeric characters describing colour or colour blend information.

See page 2 for colour code

See page 3 & 4 for blend code

### **Section 2: surface finish**

This section will always consist of 1 alphabetical character describing surface finish (G=gloss / F=frosted (sandblasted) / C= gloss & frosted (combinations e.g. seasalt blend)

### **Section 3: layout or format**

This section will always consist of alphanumeric characters describing the product format/layout information.

See website [products>formats](#) for examples

U = unit (pieces)

I = inline (sheeted)

O = offset (sheeted)

C = closed (sheeted)

S = staggered (sheeted)

### **Section 4: tile thickness**

This section will always consist of 1 numeric character describing the tile glass thickness.

(4=4mm/5=5mm etc.)

## **BLEND CODES**

<b>Code</b>	<b>Name</b>	<b>Mix: Colour.% I.e.: 110.50=arctic white.50%</b>
